

Perfect-Figure!

"I diet, eat right, exercise but something is still missing! What more can I do for that perfect figure?"

Most of us have tried home remedies and the often advertised inch-loss treatments for contouring & figure correction but nothing works. At best, the results are temporary.

Dr. Madhurima Sharma

Cosmetic Plastic-Surgeon & Anti-Ageing Expert

Fat cells in our body store the excess fat & expand to accommodate more fat when required. They reduce in size when we burn more calories than the calorie intake i.e. when negative calorie balance is achieved.

Most figure correction treatments are based on negative calorie balance concept where the treatment increases body's metabolic rate for higher calorie consumption and advice modification of food habits to restrict calorie intake. The result is effective only as long as you control your eating habits and workout regularly.

Perfect-Figure is a revolutionary treatment that corrects the figure by reducing fat storage capacity in a specific area through permanent fat removal, resulting in inch-loss, figure correction, contouring & body shaping.

The treatment is non-surgical & non-invasive. It uses precision cooling technology to freeze and crystallize the fat cells and thereby destroy them in a specific area of the body. The dead cells are removed by body's natural processes.

Applicators put on the area to be treated suck in the fat layer so that the cooling is restricted to fat cells. The skin stays protected under the anti-freeze gel applied to it. The treatment is comfortable & has no down-time. You may immediately return to normal work routine and activities. Redness & some localized bruising may occur but it clears within a short period. Procedure may take one hour or more depending on the size of the area to be treated.

One session results into almost 25% reduction in the fat cell volume in the treatment area. A maximum of three sessions resulting into about 75% fat cell removal may be conducted over the same area at an interval of one month each. Reduction in fat bulges is noticeable immediately. Measurable reduction in circumference can be seen within four to six weeks. The results last as long as the results from invasive procedure like liposuction do.

Other fat removal treatments such as lasers, radio frequency, and focused ultrasound affect fat cells but may also affect other adjacent tissue in a way that is not comparable to the *Perfect-Figure* method of cryolipolysis. The treatment is suitable for inch-loss & contouring on abdomen, abductors, arms, buttocks, flanks, hips, knees & thighs.
